

M KIRAN KUMAR

Data Analyst

+91 9390227632 | mennikiran@gmail.com | GitHub | LinkedIn | Bengaluru, Karnataka

Carrer Objective

Motivated Computer Science and Engineering graduate with hands-on experience in data analysis projects using SQL, Python (Pandas & NumPy), Excel, and Power BI. Seeking an entry-level Data Analyst position to apply my skills in data cleaning, visualization, and re-reporting to transform complex data into actionable insights and support data-driven business decisions.

Internship

Codtech IT Solutions - Backend Web Development Intern

Jan 2025 - Feb 2025

- Managed database architecture and schema designs in MongoDB, writing optimized query statements to support high-throughput, API-driven data ingestion.
- Analyzed and mapped backend data flows, identifying and resolving transaction latency bottlenecks to improve data pipeline performance by approximately 15 %.
- Enforced database normalization and clean input validation rules, ensuring 99.8 % data integrity across collaborative production testing environments.

Elewayte - Data Operations & Integration Intern

May 2024 - Jun 2024

- Implemented JavaScript-based client-side data tracking and validation scripts to capture accurate transaction logs and user interaction telemetry, improving data quality for down-stream analysis.
- Managed version-controlled data processing and validation scripts using Git and GitHub, ensuring reproducibility, collaboration, and traceability across development workflows.
- Audited cross-browser performance logs to identify and resolve compatibility issues affecting client-side analytics, enhancing the reliability of data collection and reporting systems.

Projects

Skin Disease Detection System

Python, Machine Learning, Computer Vision

- Developed an image processing and automated classification pipeline utilizing Convolutional Neural Networks (CNNs) to identify and categorize skin abnormalities from clinical imagery.
- Engineered data preparation and normalization workflows, utilizing image augmentation strategies to resolve severe class imbalances in the clinical training dataset.
- Evaluated model training curves, validation logs, and confusion matrices to analyze model performance, presenting statistical findings to academic evaluation panels.

Clinical Data Analysis Diabetes Prediction Toolkit

Python, Pandas, Scikit-Learn

- Built a clinical analytics pipeline in Python utilizing pandas, NumPy, and scikit-learn to analyze patient clinical parameters and predict diabetic risk factors.

- Conducted detailed Exploratory Data Analysis (EDA) on clinical records, treating missing data and removing extreme physiological outliers using the statistical Interquartile Range (*IQR*)
- Evaluated model performance using Accuracy, Precision, Recall, and Confusion Matrix metrics, and created statistical visualizations including correlation heatmaps and feature distribution plots to communicate actionable insights.

Technical Skills

Programming: Python, JavaScript, HTML, CSS, Node.js, MongoDB

Development: Full-Stack Development, API Integration, Frontend Backend, Git/GitHub

AI/ML: Machine Learning, Computer Vision, Google Cloud, Vertex AI, Generative

AI Tools: Data Analysis, Power BI, Testing, Prompt Engineering

Certifications

Google Cloud GenAI Certification: Prompt Engineering for Generative AI, Prompt Design in Vertex AI, Responsible AI Principles.

Qubitech Quantum Certification: Quantum Fundamentals Program, Amaravati Quantum Valley.

Education

Bachelor of Technology in Computer Science
Siddharth Institute of Engineering & Technology, Puttur

April 2026
CGPA: 7.78
